MLSER is a scientific journal edited twice a year, in June and December.

Colaboran:

Centro de Investigación en Tecnología

Industrial de Cantabria (CITICAN)

Grupo de Investigación IDEO (HUM 660) -

Universidad de Jaén

Centro de Innovación y Transferencia

Tecnológica de Campeche (CITTECAM) -

México.

SUMARIO • SUMMARY • RESUMO

- Editorial 5
- Formalización del estudio de la danza en Paraguay 7
Formalization of dance education in Paraguay
Lydia Marcela Espínola Torres, Virginia Sánchez López. Universidad Internacional Iberoamericana (Paraguay) / Universidad de Jaén (España)
- Mejoras en el desarrollo de la competencia científica en estudiantes de primer año de secundaria en un liceo de Uruguay 22
Improvements in the development of scientific competence in first graders students in a high school in Uruguay
Nelky Daisy Imbert Romero, Eduardo Elósegui Bandera. Universidad Internacional Iberoamericana (Uruguay) / Universidad de Málaga (España)
- Estudio para realizar la acción tutorial a través de un sistema de gestión de aprendizaje en Moodle para el nivel de secundaria 41
Study to carry out the tutorial action through a learning management system at the secondary level
María Martha Diaz Pérez, Brenda Luz Colorado Aguilar. Colegio Daniel Márquez Medina / Colegios JADIOP (México) / Benemérita Escuela Normal Veracruzana "Enrique C. Rébsamen" (México)
- Estrategias de lectura para la enseñanza de las habilidades lectoras en las personas con TEA de alto funcionamiento 57
Reading strategies for teaching reading skills in people with high-operating ASD
Cristina Pinto Díaz. Universidad de Jaén (España)
- Actividades extraescolares y rendimiento académico: diferencias según el género y tipo de centro 73
Extracurricular activities and academic performance: differences by gender and public and charter school
Marta Martínez Vicente, Carlos Valiente Barroso. Universidad Isabel I (España) / Centro Universitario Villanueva-Universidad Complutense de Madrid (España); Instituto Clínico y de Investigación Interdisciplinar en Neurociencias (España); Pontificia Universidad Católica de Puerto Rico (Puerto Rico).
- Transición al empleo de personas con discapacidad intelectual en Canarias: el empleo con apoyo 90
Transition to the employment of people with intellectual disabilities in the Canary Islands: supported employment

María Teresa Peña, Lidia Esther Santana-Vega. Universidad de la Laguna (España)

- El dibujo de alumnos de primaria revelando sentimientos y emociones: una cuestión discutida por la inteligencia emocional 106
The drawing of elementary school students revealing feelings and emotions: an issue discussed by emotional intelligence
Formalization of dance education in Paraguay
- *Maria Aparecida Santos e Campos, Rosely Yavorski, Maria Verônica Santana Sales, Angelina Pulgar Buendia. Fundación Universitaria Iberoamericana (México)*
- Formalización del estudio de la danza en Paraguay 122
English teachers in Venezuela: analysis of their pedagogical beliefs and practices regarding the correction of written texts
Evelin Amada Ojeda Naveda, Inés María Muñoz Galiano. Universidad Internacional Iberoamericana UNINI (Mexico) / Westcliff University (USA) / Universidad de Jaén (España)

Editorial

Teacher training and Information and Communication Technologies (ICTs) are recurrent research topics in today's educational landscape. MLSER is enriched with contributions from authors from many different countries, a trait that can be seen in each of them. This is to say, we are facing a trend that is spreading throughout the world's educational systems which shows how education is increasingly committing itself to innovation and change.

The first article implements a methodological strategy based on guided research into the suitability of physics laboratory practices, showing how technological advances require the development of scientific thought with which students can access and transform their environment.

Its main conclusion is that the strategy developed is innovative for students by proposing guiding and didactic elements for the teaching of science, bringing them closer to today's new technological and scientific developments.

There is no question that teacher training favors inclusive and quality education, as this enables the use of innovative techniques and methodologies applied to learning difficulties. The following article addresses this issue in the Brazilian context and does so through a transversal study and interview as a way of data collection. The results show how teachers are concerned about the quality of education and how they look to other professionals for information and training within continuous and postgraduate courses.

The third article addresses teachers' preparedness in ICTs, in this case applied to the training of NCOs from the Barranquilla Naval School in Colombia. The research is carried out from the perspective of teachers, the head of the technology program, the cabin crew, the Department of Statistics, and the Department of Telematics. The results point to proper training in ICT and ongoing teacher training, which is a clear sign of teacher awareness.

The following article looks at digital and ICT topics within the field of Mathematics, aimed at specifying the level of digital empowerment and the development of mathematical skills in the teacher's induction training for this subject. A qualitative methodology is followed and the implications on the use of digital resources by teachers are evaluated. Most teachers' induction training has considerable digital empowerment, which is essential for learning mathematics and developing skills in reasoning, problem solving, mathematical modeling and communication during the teacher's education in mathematics.

There is a notable change in the following subject matter, something typical of an open journal such as the MLSER, in which any educational research subject that may be of interest is accepted. In this case, it addresses how the Senegalese education system is organized and how, following World War II, school policy was dominated by the ideology of assimilation, which has been largely inherited to this day. To change this picture, it is necessary to analyze and investigate how educational guidance laws and their written messages are used in educational programs and official instructions.

This issue of the MLSER ends with a case study of symphonic bands from Caldas (Colombia), where the relationship between musical aptitude and school performance is tested. To do so, a methodology with a quantitative approach is used that

showed the existence of positive correlations between all the variables that evaluate musical aptitudes.
