Editorial

Before you is the second volume of the Psychology Research journal, a fact that consolidates this journal, hoping that the previous issue was of interest for researchers in the Psychology and similar fields. I would like to thank all the team involved in this journal for their efforts since it is with their joined forces that this second issue sees the light.

Topics dealt with in this issue are diverse and with a great scientific relevance. The first paper deals with child sexual abuse in a context in which sex is exploited to dominate and humiliate those who are the most vulnerable, that is, children. It is focused on understanding this phenomenon, observing the psychosocial strategies of the girls from the familiar system and from the residential assistance centers as a protection resource.

From a quite different point of view, the second paper deals with the work relationships in the maritime industry and the management of conflict resolution. This topic is approached with a case study in which the organizational conflicts are classified and data is provided for a better management of the conflicts on board ships, with the use of argument resolution methods, as well as strategies to take advantages from such arguments.

The importance the determinants of the nonagricultural paid work in the productivity and welfare of farmers in South Mozambique is the topic of the successive paper. In this occasion, the owners of small and mid-size agricultural holdings that participate in nonagricultural activities, such as paid work, leads to an increase in their agricultural productivity and welfare. The importance of paid work not linked to the agriculture combined with the agriculture as part of a sustainable political strategy for the rural development was evaluated.

The next paper suggests an education model to educate on sexuality and affection for families with teenagers with a cognitive impairment, exploring the characteristics of the context of teenagers' with cognitive impairment regarding sexuality and affection. It defines the capacities and competencies that the families need to enhance in the topic and designs a pedagogical model to do so.

On the other hand, and from a completely different field, the training in the current football's goalkeepers as a key aspect for the sports performance is approached. Its aim is to review the training methodologies and how to maximize the goalkeeper's performance. It highlights the benefits of the actions made by the goalkeeper and the success this may bring in multiple contexts to boost the ability for his team to score goals and to prevent the offensives of the rival.

In the last article the various ways of living sexuality and love relationships are analyzed. On this occasion, the concept of polyamory, its different definitions and other related concepts, such as relational anarchy, is presented, differentiating it from free love and responding to some of the criticisms that regard it as belonging to neoliberalism. It also describes the different difficulties for the development of polyamory and to live the love in freedom according to different authors, focusing, finally, on the analysis of jealousy and the myth of romantic love.
